Product introduction

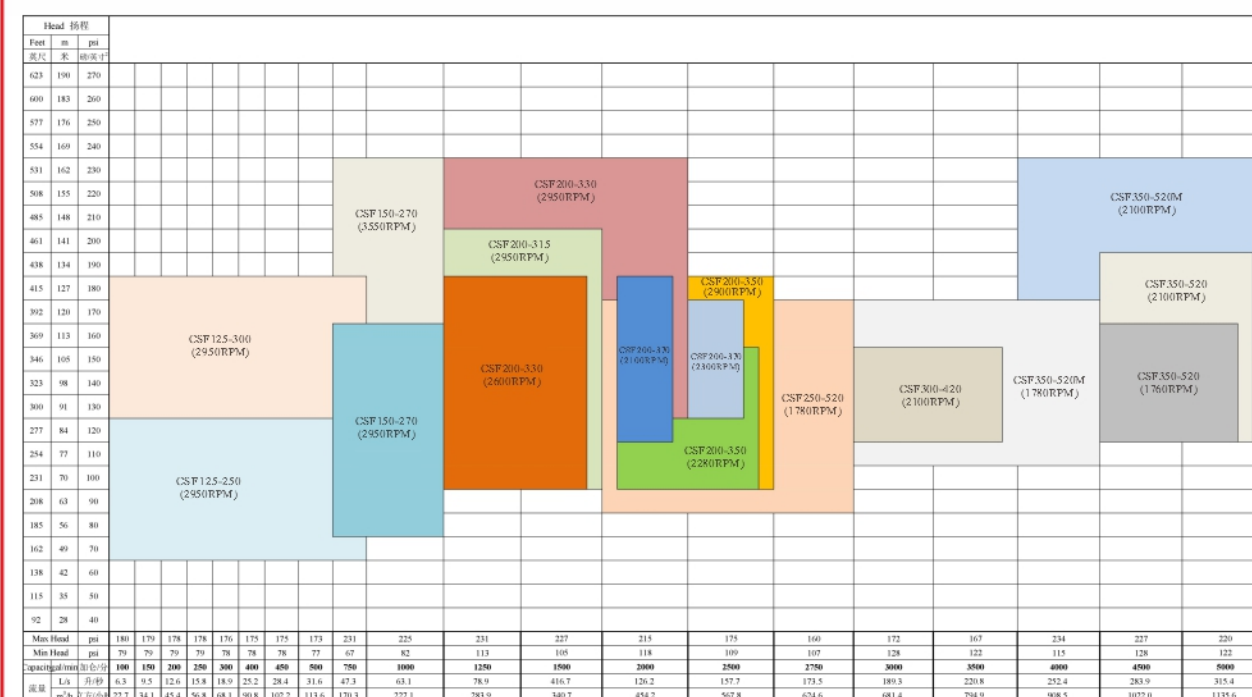

Split-case Pump Type

Capacity	100GPM - 8000GPM
Head	40psi - 362psi
Driver	Electric motor or diesel engine

★Product Features

Most popular fire pumps, with wide flow and head range, easy for service and lower cost. It is the first choice for fire pump projects.

★ Type spectrogram

End Suction Pump Type

Capacity	250GPM - 1500GPM
Head	65psi - 223psi
Driver	Electric motor or diesel engine

★Product Features

Lower cost, easy for service, suitable for flow lower than 1500gpm .

★ Type spectrogram

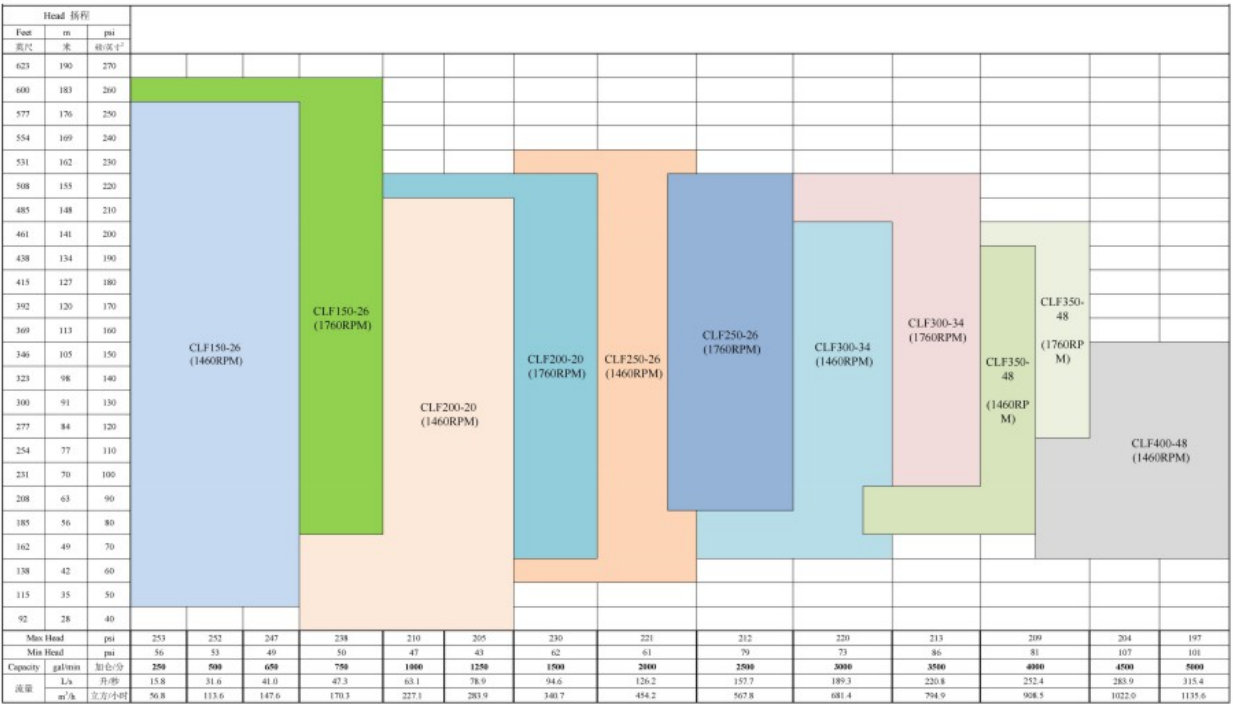

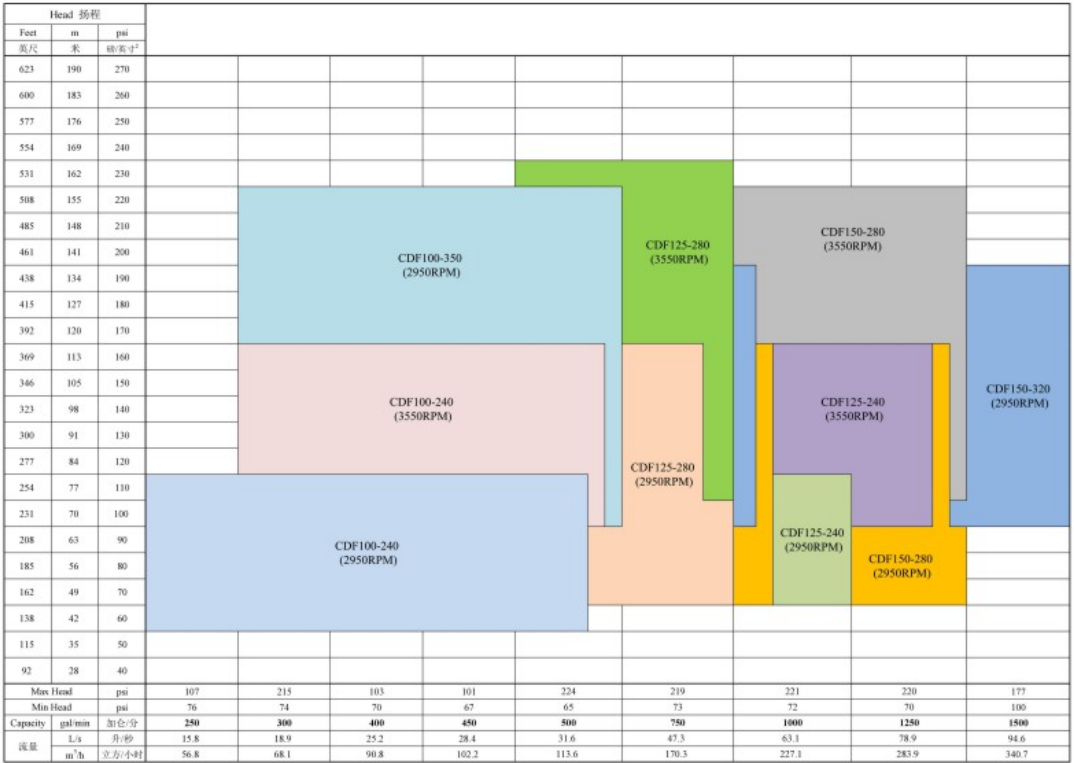

Vertical Shaft Turbine Type

Capacity	100GPM - 6500GPM
Head	42psi - 360psi
Driver	Electric motor or diesel engine

★Product Features

Be suitable to be used where a static suction lift is involved, can save pump room space too, but cost is higher than other pumps, on site job and service is difficult.

★ Type spectrogram

Jockey Pump

Capacity	1L/S - 20L/S
Head	According to the rated head of the main fire pump to determine
Driver	Electric motor

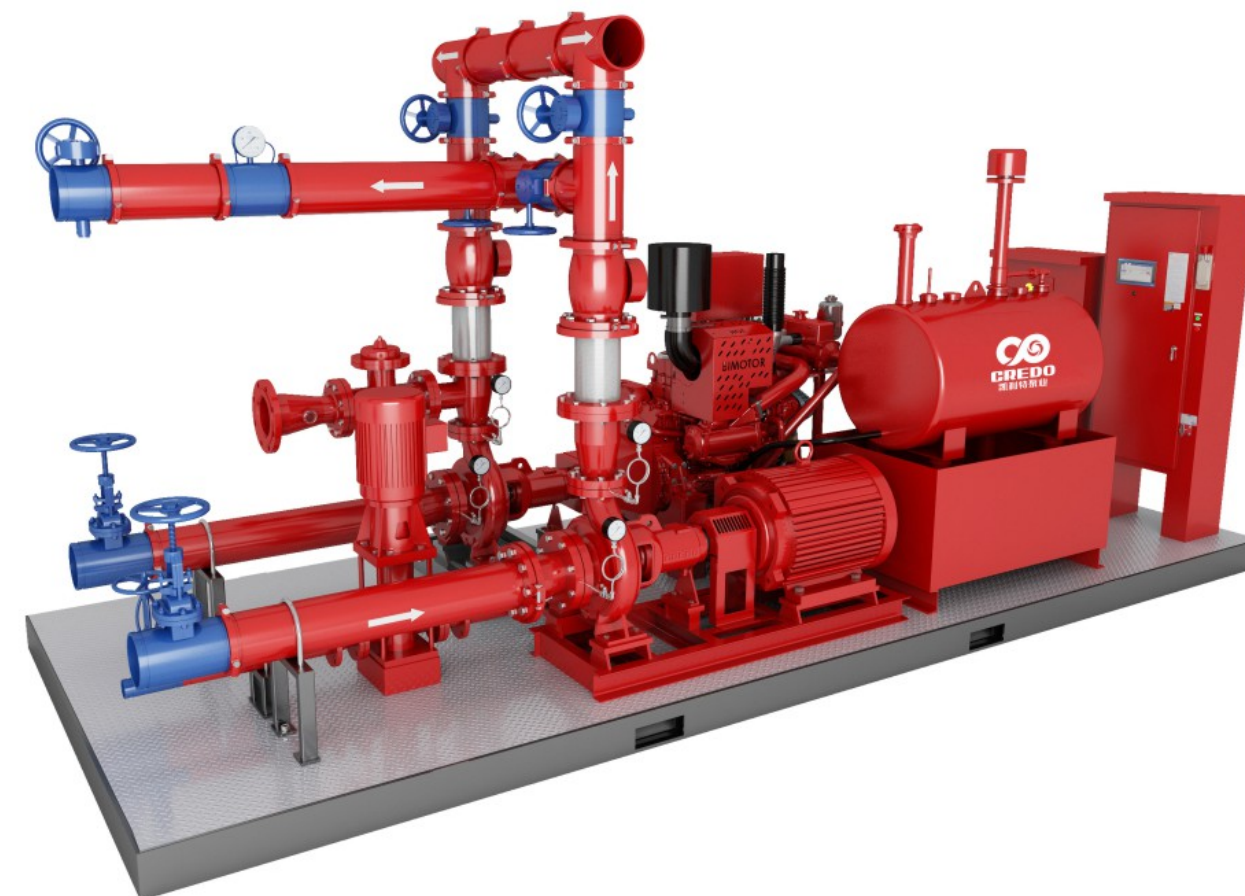

★Product Features

For a certain period of time, keep the system pressure constant without starting the main fire pump. Usually, 1% of the rated flow of the main fire pump is used as the flow rate of the jockey pump, and the rated lift is 10 psi higher than that of the main fire pump.

NFPA20 Fire Pump Package System

For UL/FM project (Pump, diesel engine, controller, valves, flow meter, main relief valve and circulation relief valve need UL or FM products, Motor must be UL Listed)

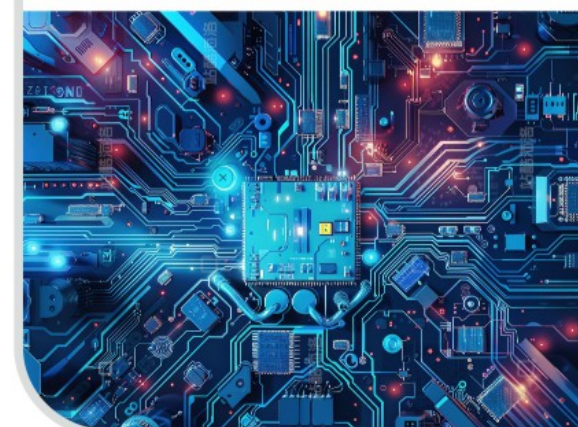

Application area

• Construction (office buildings, large supermarkets, hotels, etc.)

• Mechanical, Electronics, biology, medicine

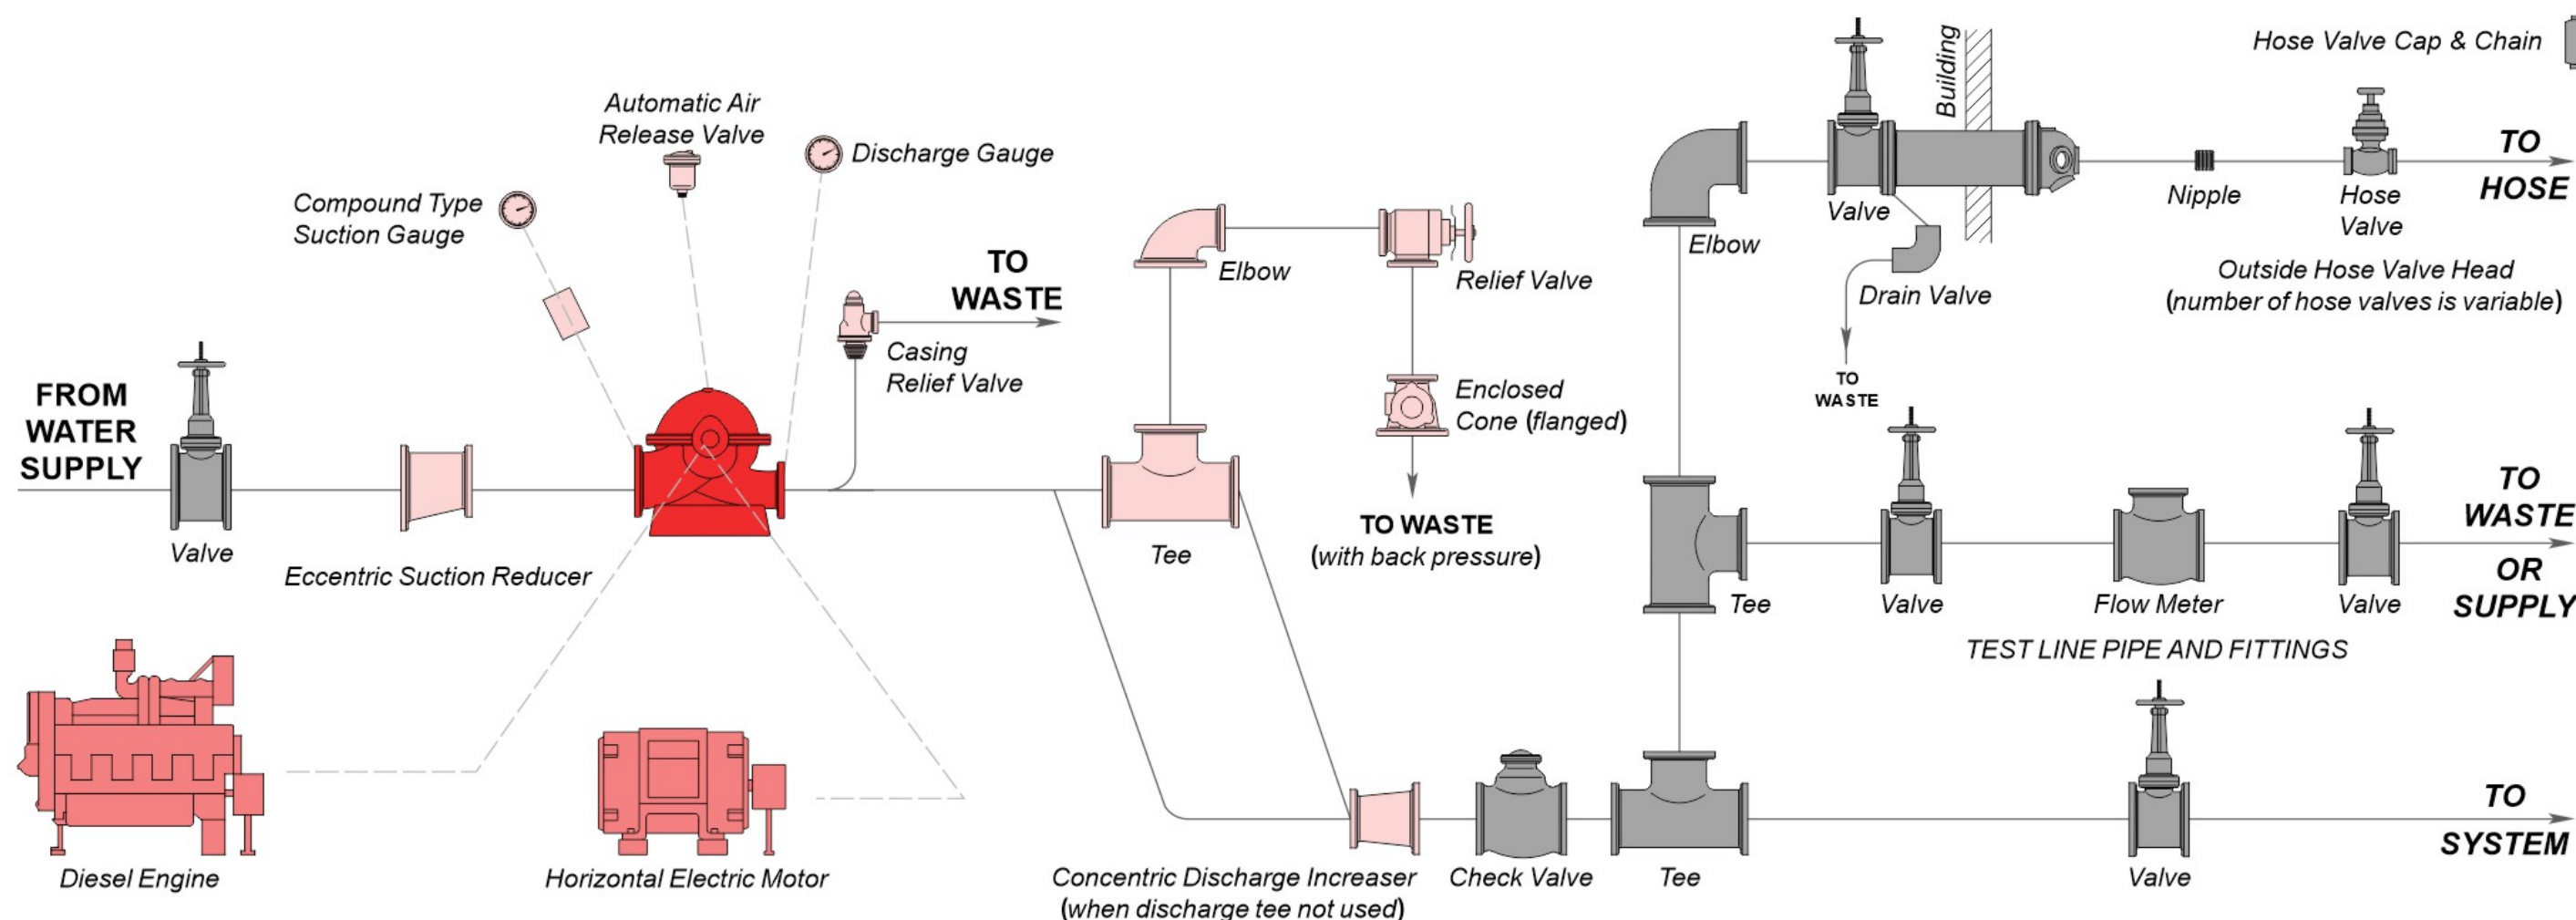

- **Products and Application Fields:** All petroleum and chemical engineering companies and oilfields, refineries, oil pipeline bureaus, oil storages, oil terminals, offshore platforms, etc. under PetroChina, Sinopec, and CNOOC.

- Steel plants, power plants and other new energy industries
